10 Free-hanging roller blinds

6 Wooden and bamboo blinds

4 Aluminium blinds

16 Vertical blinds

12 Roller blinds with side channels

8 Pleated blinds

ANWIS Polska attaches the utmost importance not only to the final product itself but also to every little detail it is made of. As a result, we can offer products whose high quality is confirmed by ISO 9001:2008 standard as well as numerous other certificates, prizes and distinctions – Fair Play, Gazele Biznesu, Lider Polskiego Biznesu, Lider Marki, among others.

Aluminium horizontal blinds

protect the room against excessive heat and allow ample air circulation. They also make it easy to hide away from prying eyes while still allowing the desired amount of light to come through. The blinds can be drawn totally or partially.

Unique ambiance

A wide colour range, easy operation and durability of horizontal blinds make them an interesting decorative element for windows and interiors. The blinds will beautifully complement curtains, at the same time protecting them from yellowing and bleaching. A further option is the Light Less system which darkens the interior with a specially perforated aluminium tape.

Key benefits

- protection against excessive heat and UV radiation
- free air circulation
- control over the amount of light entering the room without lifting the blinds
- good quality materials ensuring high durability
- practicality and comfort

horizontal blind 50 mm	*	*	*
Venus horizontal blind / Venus Standard 25 mm			

Wooden and bamboo blinds

finest quality natural materials and attractive finishing components create a comfortable atmosphere of casual elegance and simple sophistication. Natural patterns and shades on the wood and bamboo add a touch of nature to any interior.

Tradition and modernity

A wide colour range and their practicality make horizontal blinds an exciting decorative element. An interesting type of wooden blind is the RETRO blind, whose mechanism and stylish finish are a tribute to the blinds crafted at the beginning of XX century.

Key benefits

- control over the amount of light coming into the room without raising the blind
- free air circulation
- finest quality natural materials and finishing components
- a perfect match for curtains
- practicality and smooth operation

Venus bamboo 25 mm			

Pleated blinds

Pleated blinds are one of our more innovative solutions they make it possible to cover the chosen part of the window, if necessary leaving its upper and/or bottom parts uncovered.

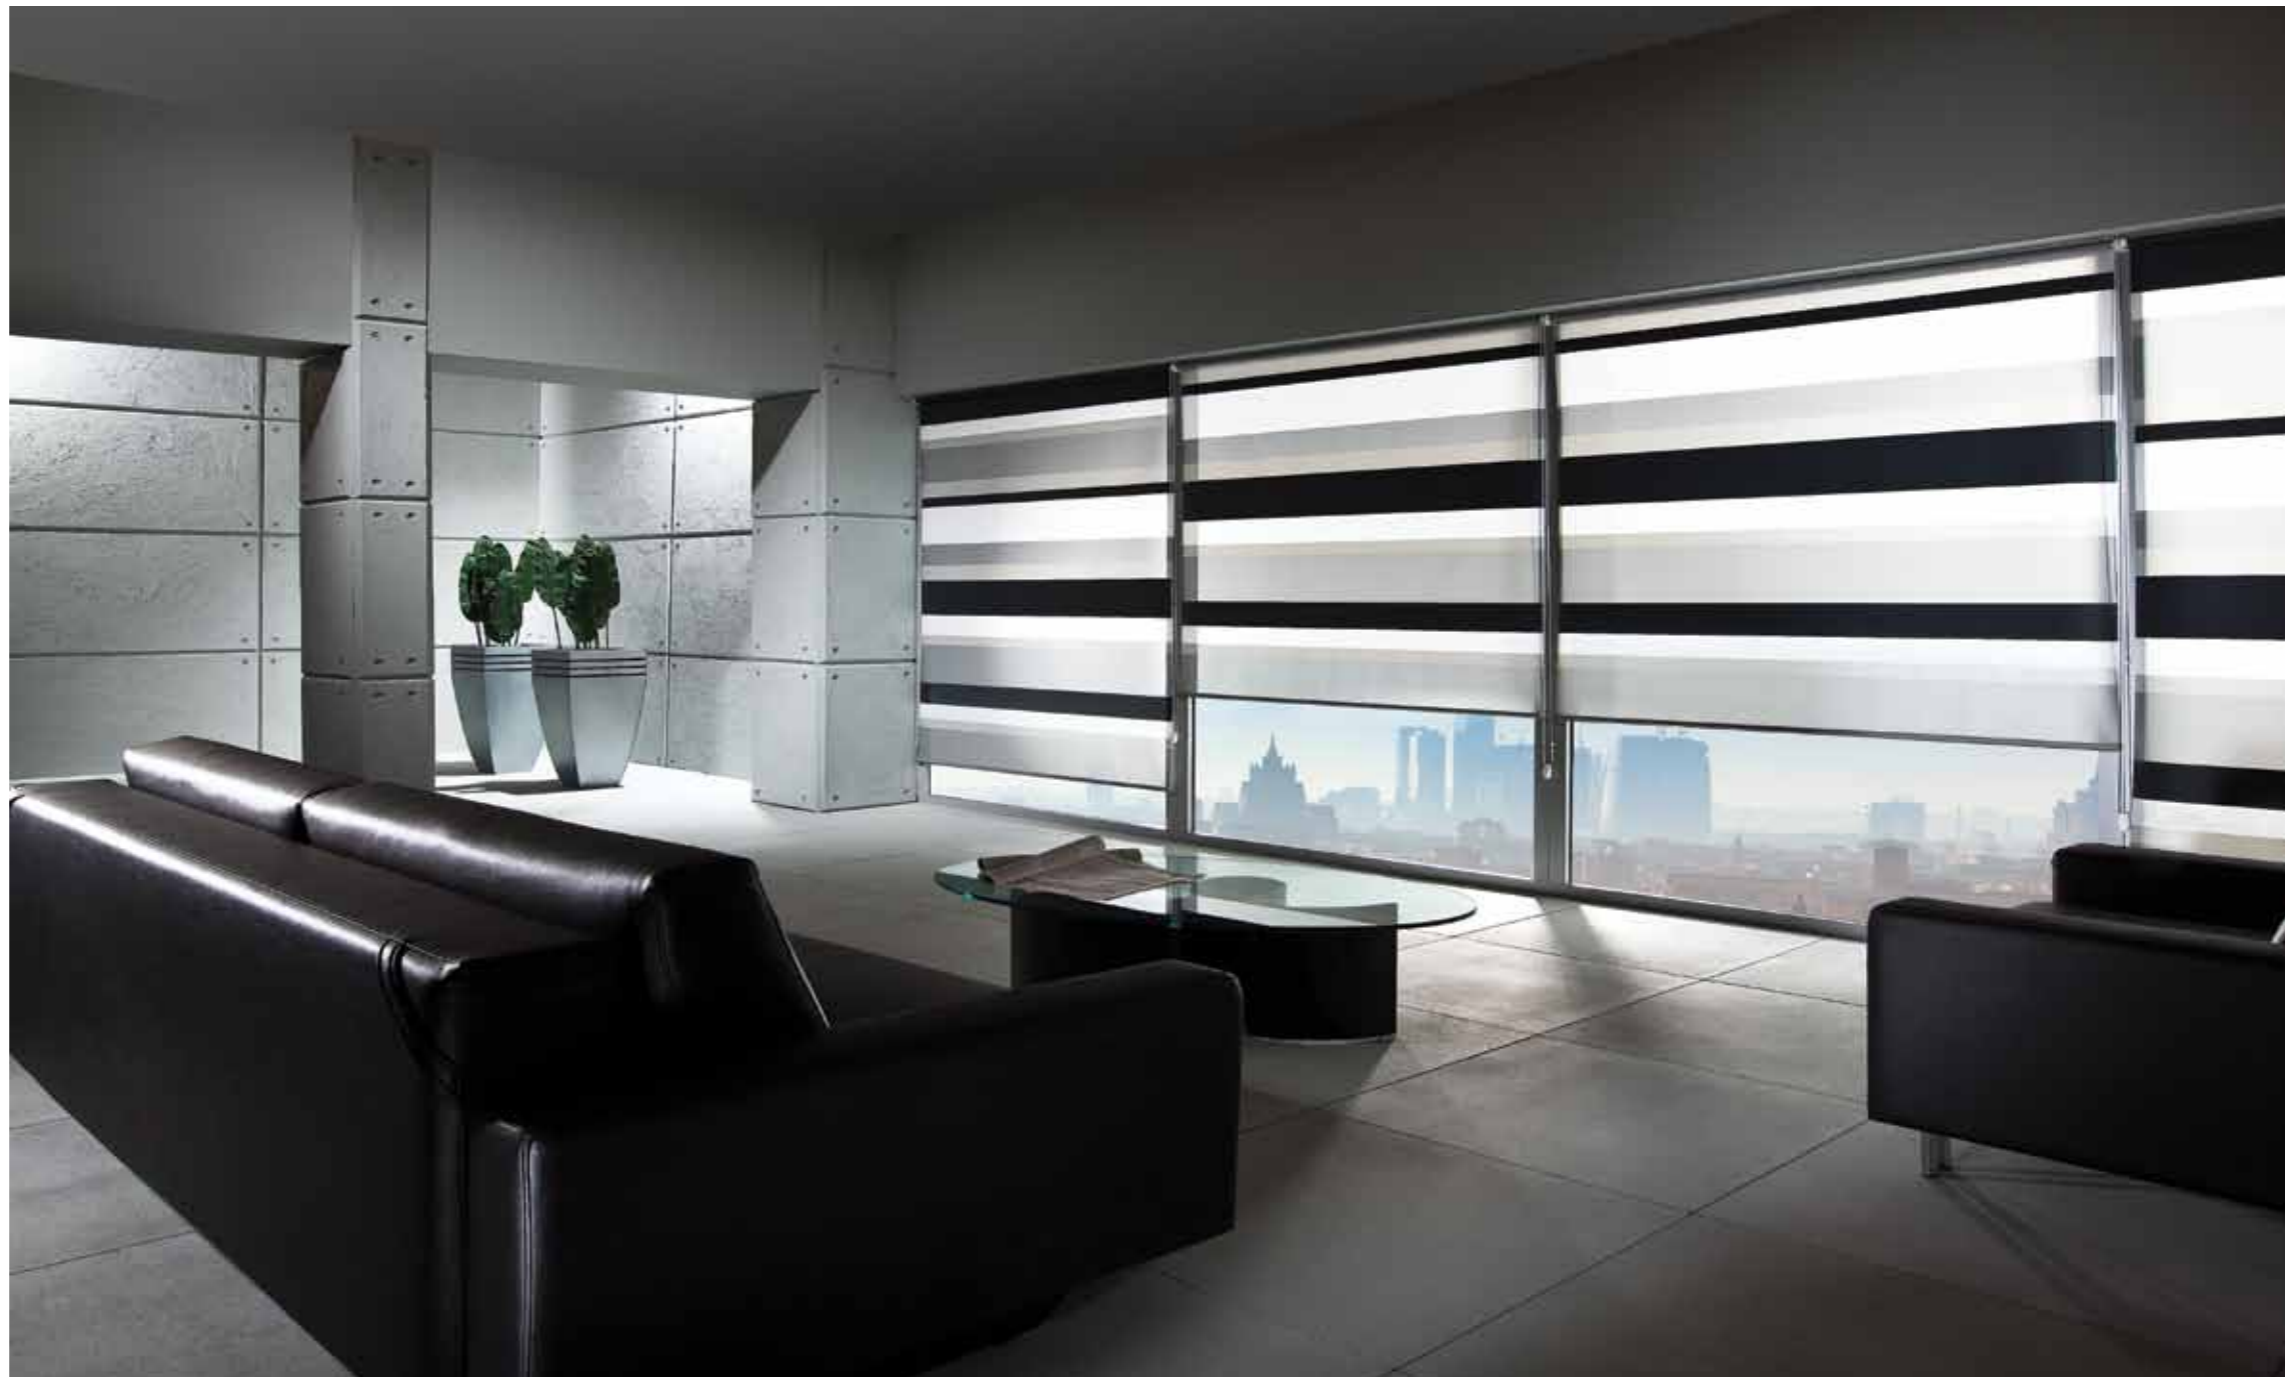

Unusual shapes

Pleated blinds come in various shapes – from the standard ones to polygons, irregular triangles, circles and oval shapes. Their versatility makes them suitable for all types of windows including skylights, conservatories and special glass roof structures.

Key benefits

- when raised, the blind does not stand in the way of the light coming in through the window
- implementation of new, interesting solutions (eg. 2 different types of fabric in one product)
- control system which allows raising and lowering of the blind to the desired height
- smooth operation

Type of pleated blind	unusual shapes	non-invasive mounting system – optional	roof window	electric control – optional

Free hanging roller blinds

they are a reliable form of protection from excessive sunlight as well as an attractive decorative feature, which improves the proportions of windows to the interior.

Enhancing the look

The wide variety of patterns and colours of fabrics enables you to select a roller blind with its use clearly in mind right from the start. Light, transparent fabrics will optically enlarge and brighten up the room, whereas patterned fabrics will add dimension and maximize its space. For rooms which serve as bedrooms during the day (eg. nurseries) blackout fabrics are recommended.

Key benefits

- manual or electric steering allows lowering of the blind to the desired height
- protection from excessive sunlight, computer screen glare is no longer an issue
- perfect for protection of big surfaces: shop windows, alcoves, shelves, may serve as a projection screen, too
- implemented technology allows you to increase the size of the blind up to 20 m²

Type of blind	cassette roller blind – optional	non-invasive mounting system – optional	electric control – optional
RM 18 / RM 25		*	
RM 32	*		*
RM 45 / RM 50 / RM 65			*

Roller blinds with side channels

side channels and the cassette allow light transmission to be reduced to a minimum.

Freedom of design

The self-locking mechanism guides the fabric even when the window is in the tilted position. A wide range of colours, patterns, accessories and laminates enables you to enjoy creative freedom. A small cassette allows a maximum opening angle, making it possible to use the blinds in terrace patio doors.

Key benefits

- control system allows raising and lowering of the blind to the desired height
- the blind can be mounted on all types of windows (wooden, aluminium, PVC)
- the bottom bar creates an ideal amount of tension on the fabric, even in tilted windows
- side channels keep the fabric close to the window pane, even in tilt windows

Type of blind	non-invasive mounting system – optional	C-Type side channels – optional	roof windows

Fantasia Lux, Mini Lux	*	*	

Impression roller blinds

combines the function of a blind, a roller-blind, a curtain and a screen, enabling the user to exercise total control over the amount of light entering the room, without ever lifting the blind.

Universal sun protection system

Impression roller blinds work by overlapping transparent and non-transparent strips of fabric so that you can manage the amount of light entering the room. When operating the blind the user moves the strips; when two - non-transparent and transparent - strips overlap, the blackout effect is achieved. This type of blind is universal and fits all types of windows.

Key benefits

- venetian and roller blind combined into one product
- control over the amount of light coming into the room (without raising the blind)
- operating ball chain and rotating fabric weight enabling smooth operation
- attractive range of fabrics and colour-coordinated accessories

Impression Typ 18 / Typ 32	*			*	

Vertical blinds

are the perfect solution for large glass structures. Whilst allowing you to enjoy your surroundings, they retain the feeling of intimacy and provide sun protection.

Mounting and application

Vertical blinds can serve as doors as well as partitions between rooms. Closing and opening (the lamellas rotate up to 180 degrees) is performed by a ball chain (manual steering) or a motor (electric steering). The rail may be mounted not only horizontally, but also diagonally. The lamellas can be replaced without dismantling the rail.

Key benefits

- wide range of applications: big glass surfaces, partitions, doors
- a variety of patterns and colours with the possibility to swap the lamellas
- can be mounted on slanted walls
- extensive range of fabrics, including ones meeting rigorous health and safety standards

Type of vertical blinds	unusual shape, slant	electric control – optional	possibility to swap lamellas
Vertical blind 89 mm	*	*	*
Vertical blind 127 mm	*	*	*

Panel tracks

a modern window cover, an effective replacement for curtains. Frequently used as a partition as well as a wall decoration.

Interior decoration

a panel track blind consists of a panel of material attached to a sliding track system; the track is mounted onto a wall or a ceiling. The panel can be opened sideways, symmetrically or closed. Its practicality, ease of operation and impressive fabric collection on offer make the product extremely popular.

Key benefits

- easy to fit: in alcoves, on walls and ceilings amongst others
- practicality and versatility of panel structure
- freedom to combine patterns and colours, possibility of swapping panels
- Velcro-type fastening system
- easy assembly and disassembly

Type of track	electric control – optional	possibility to swap panels
